Smith's COLOR FLOOR

is a water-based extra-strength stain developed to achieve a decorative natural appearance on concrete floors and other porous mediums. It is an excellent tool for the decorative concrete market that can produce unbelievable works of art. Formulated as a user-friendly alternative to hazardous solvent and acid-based stains, Smith's Color

Highlights

Water Submersible

Floor utilizes state of the art pigment preparation and new acrylic polymer research to ensure the highest quality results. The stain adheres to a variety of surfaces including, but not limited to, interior and exterior concrete, brick, plaster, and natural stone. Thanks to its superior adhesion, Smith's Color Floor can be applied to previously sealed surfaces, thus allowing an applicator to save jobs with little

hassle. In addition to the Classic Series (semi-transparent stains), Smith's Color Floor is available in Old World Series (transparent stains), Bright Light Series (high-chroma stains) as well as Smith's Color Accents for metallic, iridescent, pearlescent and flip-flop colors.

Fast Air Dry
Weather Resistant
Alkali Resistant
Ultra Violet Light Resistant
Low Odor
Overnight Deliverable – No Red Label
Colors are intermixable
Custom Color Matching

* Available with predetermined order size.

Smith's Color Floor can be applied via airbrush, high volume low pressure (HVLP), airless sprayer, production gun, pump-up sprayer, sea sponge and traditional bristle brush. For best results, create a "mist" of Smith's Color Floor on the intended surface. A variegated finish is achieved through the various absorbencies of the surface material as well as the differing specific gravities of the

color pigments. Therefore, the application of several coats or the use of a roller applicator results in a more monotone appearance or painted look. Concrete sealer is recommended to extend the

stain's longevity. Smith's Color Floor is compatible with single and two component epoxies, urethane, solvent and water-based sealers. Smith's Color Floor is not compatible with Methyl Methacrylate based sealers. In addition, "penetrating" (e.g. sodium silicate) sealers will not penetrate Smith's Color Floor, thus will not provide any protection.
